

MONTHLY WEATHER MAP

MAY 1959

General Summary of Weather Conditions

Temperatures across Canada in May were above normal in the east and below normal in the west. Precipitation was deficient in Quebec and the Maritimes, in the Saskatchewan and Qu'Appelle Valleys, and along the Pacific Coast, but excessive in northwestern Ontario and Manitoba and in the area between the Bow and Fraser Rivers. In many areas, the tendency, visible for some months, for above average sunshine, was continued.

May 1959 was sunny, dry and cold in the Island of Newfoundland, and warm with near-normal precipitation in Labrador. Temperatures ranged from two degrees below normal in the Avalon Peninsula to three degrees above normal at Goose Bay.

There were no really severe storms, although a late season snowstorm brought seven inches of snow to the Avalon Peninsula on the ninth. Precipitation was generally deficient by forty to sixty per cent. There were about thirty-five hours more bright sunshine than is usual in May. Mean wind speeds were exactly normal at Torbay, but above normal at Gander.

In the Maritime provinces, May 1959 was relatively warm and dry. Temperatures were below seasonal values in the first week, but a rising trend gave temperatures in the high seventies on the 12th and 13th. Another warm spell gave record or near-record temperatures on the 26th and 27th, Halifax reaching 87°, Fredericton 90, and Edmonton 91.

Precipitation was in general rather light. Storm centres for the most part by-passed the Maritimes to the north and south, and precipitation totals averaged about half the usual amount for May.

Hours of sunshine were again above normal - for the eighth consecutive month - and the month was rather more windy than the average May in Nova Scotia.

In most of Quebec May was an exceptionally warm, dry month. Warm spells occurred about the 6th and 7th; 19th to 22nd, and 26th to 30th, with maxima frequently reaching into the 80's along the St. Lawrence Valley.

Storm centres were generally routed across the northern part of the province. Montreal and Quebec City both reported the driest May in eighteen years. On the other hand, precipitation amounts were excessive in the far north of the Province; Great Whale River, Fort Chimo, and Knob Lake reported precipitation more than twice the usual May amount.

Temperatures in Ontario in May were three or four degrees above normal in the south and east. There was a general cool spell in mid-month; Sudbury had a two inch fall of snow on the fourteenth, and there were occasional frosts in the Province on the 15th or 16th. The end of the month was unusually warm and in the last week temperatures into the 80's were common. In northwestern Ontario the temperature regime was very different; temperatures averaged a little below normal, with warm temperatures in the beginning and middle of the month, while the last two weeks were rather cool.

Storm centres moved mainly across western and northern parts of the Province. Precipitation was copious in the Thunder Bay area; stations northeast of Sioux Lookout reported six to seven inches of rain, over three times the usual May amount. Lakehead Airport reported ten thunderstorms in the month, 5 times the normal May quota.

In southern Ontario, precipitation falls were due largely to the warm humid air masses or to cold frontal passages, and there were a number of thunderstorms. Rainfall

amounts were therefore very spotty. There were deficiencies along the north shores of Lakes Ontario and Erie - precipitation was less than half normal in the Toronto area - and in the eastern part of southern Ontario where deficiencies reached eighty per cent at stations between the Ottawa and St. Lawrence Rivers. Some of the thunderstorms were of considerable violence; on the 31st, London had 1.98 inches of rain, a new record for May, and on May 11, Ottawa Airport reported wind gusts reaching 84 m.p.h.

Both wind and sunshine were, on the average, rather above normal in most areas.

Temperatures in May averaged below seasonal values everywhere in the Prairie Provinces. Warm and cold spells alternated in the first two weeks, culminating in a warm spell, with temperatures into the mid 80's on the 16th or 17th. The latter part of the month was rather cool.

Precipitation varied greatly across the Prairie Provinces in May. In was copious in southeastern Manitoba, with amounts reaching well over twice the May normal Saskatchewan averaged about half the usual May amount. In most of Alberta, too, there were deficiencies of thirty to forty per cent. The deficiencies were mainly in the form of rain, since snowfalls totalled above the usual amount for May. Southwest of the Bow River, precipitation was above normal, with surpluses particularly heavy at Banff and Claresholm.

With the exception of southeastern Manitoba, which was rather dull, hours of sunshine were above average for May across the Prairies. Wind speeds were about average for the region, except in the Winnipeg area, where May 1959 was the windiest month on record. On the 10th, Winnipeg Airport reported an average wind of 50 m.p.h. from the northwest for one hour, a new 21-year record for that station. Strong winds were general across the Prairies in the period 10th to 12th May, and many stations reported blowing dust.

May was rather a cool month in British Columbia, particularly in the Okanagan-Arrow Lakes region. Precipitation was well above normal in the southeastern part of the Province with surpluses of sixty to over a hundred per cent eastward from Lake Okanagan. In the region of Vancouver and Victoria precipitation was about normal for May but elsewhere in the western part of the Province, falls were a little below the usual May average.

At Victoria, the month was rather breezy, although normal elsewhere. Hours of bright sunshine were above average for May at both Victoria and Vancouver.

May was rather cool in the Yukon, and moist in the south, but dry further north. The first three days were exceptionally cool. On May 1st, Whitehorse recorded a minimum of 16.6 degrees. The night of May 2-3 was one of the coolest ever experienced in the Yukon in May; Dawson had a minimum of 8 degrees, the lowest May temperature ever recorded there.

Whitehorse had more than twice the normal rainfall in May, and Snag an excess of sixty per cent; but further north, falls were about half normal. The precipitation was almost all rain, with only a trace of snow. Wind speeds and cloudiness were about normal for the month.

Temperatures were below normal about everywhere in the Northwest Territories in May, the only exception being at Frobisher and Resolution Island. Precipitation was about half normal in Mackenzie, but about twice normal in the central part of Franklin and at Frobisher Bay.

MAY 1959

TEMPERATURE, PRECIPITATION AND SUNSHINE

The temperatures for the month are given in degrees Fahrenheit in the temperature columns under the following headings:
 MAX. The highest temperature.
 MIN. The lowest temperature.
 MEAN The mean temperature for the month.
 The remaining columns give the following information:
 PRECIP. The total precipitation in inches for the month including the

rainfall and the equivalent of the snowfall.
 SUN The total hours of bright sunshine for the month.
 SNOW ON The depth of snow in inches lying on the ground at the end of the month (when reported).
 The use of A following the station name indicates that the meteorological observations are taken at Airport offices.
